

# SURVEILLANCE UPDATE

## Falls in the past 3 months that caused an injury: N.C. & U.S.: 2006 Behavioral Risk Factor Surveillance System

Percentage of people age 65 or older, who reported falls injury in the past 3 months, by gender: N.C. & U.S. BRFSS 2006

Percentage of people age 65 or older who reported falls injury in the past 3 months, by age group: N.C. & U.S. BRFSS, 2006

Percentage of people age 65 or older who reported falls injury in the past 3 months, by marital status: N.C. & U.S. BRFSS, 2006

Percentage of people age 65 or older who reported falls injury in the past 3 months, by self-reported health status: N.C. & U.S. BRFSS, 2006

\*includes divorced, separated, widowed and never married. NC too small

Weighted to provide estimates representative of the adult non-institutionalized population; persons aged 65 years and older who reported having fallen down one or more times in the past 3 months and fall resulted in injury. Specific data on 95% confidence intervals is at the N.C. BRFSS website.

The N.C. Behavioral Risk Factor Surveillance System (N.C. BRFSS) provides a critical source of public health data for understanding the scope of the injury-related problems and measuring progress toward overall statewide goals. N.C. BRFSS is a comprehensive telephone survey of adults ages of 18 and older. The sample size for the 2006 N.C. BRFSS was nearly 16,000. Every year a core set of injury-related questions are asked on topics such as falls, seatbelt usage, and drinking and driving. The sampling scheme has been designed to produce estimates for local levels (22 counties and 13 regions) and for special populations such as Native Americans and Spanish-speaking and English-speaking Hispanics. See the N.C. BRFSS website for more information, specific details on item responses and data limitations: [www.schs.state.nc.us/SCHS/BRFSS/](http://www.schs.state.nc.us/SCHS/BRFSS/).

US BRFSS data for this Surveillance Update was published in CDC's MMWR: March 7, 2008 / 57(09);225-229.
